

Application – Area of Refuge Tech Works Solution - Voice-Call

General Description -

When large properties require remote intercom to many areas such as stairwells and parking garages with a central security station, Tech Works answers the call. Standard intercom components were used to deliver clear communications to each area. When a person in a remote area presses the intercom button, the call is answered at the main security station on the property. The security guard has a telephone and a video monitor so that he can evaluate every person and their individual situation. Once he has verified who the person is and what their needs are he can render the appropriate support. A separate intercom call station is provided at each stairwell door, each elevator lobby, and in strategic locations such as long hallways, plaza areas, doors or parking entrances and exits.

Basic system components:

| Product | Purpose or Function |
|----------|--|
| 2590-TC | Telephone Console with Caller ID |
| 2021 | Correctional Grade Speaker Station w/ call button |
| 2590 | Telephone interface module supports any consumer grade corded or cordless telephone w/ CID |
| 2528 | High Power Intercom Amplifier supports up to eight 25-volt industry standard speakers (one at each gate) |
| PSD-1270 | Power Supply |

Benefits of using Tech Works –

- Distributed processing allows for easy installation and configuration of each calling station.
- Intuitive telephone operation provides clear two-way communication and requires little or no training for staff members.
- Redundant circuitry allows for call processing even in the event of audio failure.
- Direct interface with PBX (if desired) for call routing.
- Free Topology Wiring allows flexible cabling schemes.
- The system works over standard fiber optic interfaces.
